The Cleanroom Specialists

WG SERIES

Walkable ceiling systems provide a cost-effective and straightforward solution for proper maintenance of cleanroom equipment and facility services.

CleanAir Solution's WG Walkable Gasket Grid system provides the structural reliability needed to meet the requirements of a truly walkable ceiling system.

The pre-engineered extruded aluminum grid members serve as structural I-beams to carry the loads typically applied to a walkable grid system.

All of our WG systems feature 2-inch wide extruded aluminum grid members joined by our heavy-duty 4-way connector system with rod-hung suspension and factory-applied gaskets.

The factory-applied gasket eliminates the need for intensive field application. Our WG Series Grid utilizes 3/8-16 threaded rod for suspension, which is the most highly recommended for walkable applications.

We offer walkable panel systems from 1/2" thick up to 2-1/8" thick depending on the load requirements. Panels are fabricated from aluminum honeycomb in our standard powder coat white finish. Diamond tread plate is also available throughout or to designated specific walkways.
